Larry Hole, P.E. Board Member Receives the ASME Award For Dedicated Service

Larry Hole, P.E. (left) and David Wieland (right)

Larry Hole, P.E. of Wichita, was presented an award from the American Society of Mechanical Engineers, ASME, at their Regional Administrative Conference which was held in Minneapolis, Minnesota, on April 5, 2003. According to David Wieland, Vice President for Region VII, "Larry has been an outstanding member of the Region VII Management team and has been deeply involved in promoting the ASME to both students and members of ASME. His dedication and efforts have resulted in many successes for the region including the Regional Student Conference and RAC held in Wichita last year.

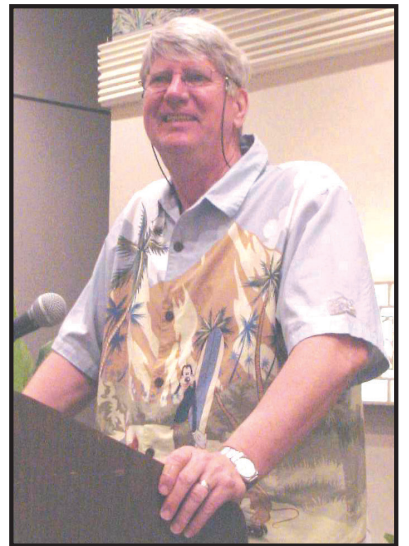

"The purpose of the ASME dedicated service award is to honor unusual dedicated voluntary service to the Society marked by outstanding performance, demonstrated effective leadership, prolonged and committed service, devotion, enthusiasm, and faithfulness."

Larry has been a member of the Kansas State Board of Technical Professions since 1998, and is currently serving as Vice-Chairperson.

NCARB Spring Regional Meeting

The annual meeting of the Central States Conference (Region 5) was held on April 9-12. This year Region 5 combined their meeting with the Southern Conference (Region 3) and the New England Conference (Region 1). The NCARB National Officers also attended the meetings and presented updated information on the activities of the Council.

Attending the meeting from the Kansas Board were Stan Peterson, who is also on the NCARB Board of Directors, Joe Vanderweide, architect, and Betty Rose.

Board of Technical Professions Visits Kansas State University

Pictured above is Donald Rathbone, P.E., speaking at the Kansas State University Student Forum.

The February 28 meeting of the Board of Technical Professions was held on the campus of Kansas State University at the College of Engineering Complex. The Board had a pizza lunch with engineering, architecture, landscape architecture, and geology students. After lunch, the Board held a forum with the students to explain the importance of becoming licensed. Former KSU Dean of Engineering and public board member, Donald Rathbone, also talked with the students about the relationship of the regulated professions and the professional societies.

The students were invited to ask questions of the

Board, and handouts were distributed for their future information. Engineering students were also instructed on how to sign up online through the board's Web site for future administrations of the Fundamentals of Engineering Exam.

The Board appreciates the hospitality of Dean Terry King, and Richard Hayter, Associate Dean for External Affairs, for hosting the Board. The College of Engineering sponsored the pizza lunch. The Board also appreciated the assistance of Tony Barnes, Professor of Landscape Architecture.

Pictured above are students attending the student forum at Kansas State University.

AGENCY MISSION

To provide maximum protection of the health, safety and welfare of the people of Kansas by assuring that the practice of engineering, architecture, land surveying, landscape architecture and geology in the state is carried out only by those persons who are proven to be qualified as prescribed by the statutes and rules and regulations of the Board of Technical Professions.

Programs Established To Assist With Agency Mission
Licensing, monitoring and regulating of technical professions:
• Examine and certify Intern Engineers
• License, monitor and discipline Engineers
• License, monitor and discipline Architects
• License, monitor and discipline Land Surveyors
• License, monitor and discipline Landscape Architects
• License, monitor and discipline Geologists
• Licensing of Professional and General Corporations

BOARD STAFF

Routing your calls to the numbers below will allow our staff to better assist you by answering questions about the areas they handle. You may also leave a message on our voice mail if we are unavailable and we will return your call promptly.

Speedy Exit

*From the Kansas State Fire Marshal's Office - By Rick Fay, Architect
April 28, 2003*

Loss of exit is one of the leading contributors to injury and death in fires and explosions throughout history. The Kansas State Fire Marshal regulates the construction and maintenance of exiting in all but one and two family dwellings in Kansas. A review of buildings less than 100 years old the past 10 years indicates Kansas has and continues to inherit structures without adequate exiting.

Statute is in place to protect both owner and occupant from changing codes and enforcement. However, the State Fire Marshal emphatically states: 1) existing construction is considered distinctly hazardous if it impedes or reduces exiting from a structure to a safe place and must be corrected; 2) new construction must be code compliant; and 3) new construction cannot reduce required exiting from an existing building. Building construction areas are defined by the Kansas State Fire Marshal as hazardous areas in all building occupancies. Hazardous areas are separated from occupied buildings or portions of all building occupancies by one hour fire resistive construction. Occupants are not permitted to exit through a hazardous area.

Schools are a top priority of the State Fire Marshal. Schools are any structure used by or on the land of a public or private operated school entity. The State Fire Marshal is given the responsibility to order school entities to stop or correct any condition which impairs exiting or is otherwise dangerous. Statute requires that architects or engineers licensed in Kansas prepare construction documents for school construction specifically. Additionally, Kansas Statute 31-150, requires all community colleges, vocational and technical schools, colleges and universities to have a code footprint submitted to the State Fire Marshal for approval prior to commencing construction. A recent violation of this statute has prompted a stern warning: If construction that affects exiting is commenced at a college or university prior to receipt of the code footprint – the State Fire Marshal shall issue to the building owner a cease and desist order, which will stop construction until adequate documentation is provided to the State Fire Marshal and the order is lifted.

The State Fire Marshal Office thanks you for your careful review and application of the chapters related to building exit and alterations of existing construction.

The Board Office Space Has Been Renovated

Hopefully you have not even noticed that the Board office has moved two times lately. In April, the office was relocated to Suite 509 of the Landon State Office Building while renovation was occurring in Suite 507. The move back to the renovated offices is scheduled to occur July 1. Our office address is not changing.

The renovation includes new floor and ceiling materials, security enhancement, updated computer workstations, and expanded file storage for the office staff. Additional office space was also acquired. The move and renovation process has gone extremely well, and the office enhancement is a very welcome change. The state facility staff and construction workers have done an outstanding job in completing this project.

Cancellation of Licenses Due to Noncompliance of CE

Summary: As per regulations 66-14-1, 66-14-2, and 66-14-3 each land surveyor, landscape architect, architect, landscape architect, and geologist has to have 30 professional development hours of acceptable continuing education each renewal period. As part of the renewal process, Jack Jones, architect, and John Colbern and Brian Kubicki, professional engineers, were selected for an audit of professional development hours. The licensees failed to obtain continuing education or to provide documentation of appropriate PDHs for renewal of their licenses.

Board Action: As a result of the failure of Mr. Jones, Mr. Colbern, and Mr. Kubicki to provide proof of the appropriate hours of continuing education, the Board entered a summary order directing the licenses to be cancelled. The summary order directed each licensee that he had a right to contest the Board’s action in the matter and that he could request a hearing, which none did.

Report of Alleged Violation Procedure

An important part of being a professional is helping to uphold the high standards of the profession. Webster's Dictionary defines a profession as "a calling requiring specialized knowledge and often long and intensive academic preparation." Similarly, a professional is one who is "characterized as conforming to the technical or ethical standards of a profession." The regard with which a profession is considered is a direct result of the manner in which those professionals engaged in it conduct their practice. With the title of professional comes the often very difficult responsibility of ensuring that the high standards of the professionals are maintained.

The "Rules of Professional Conduct," K.A.R. 66-6-4(p), states..."Each licensee with knowledge of any

alleged violation of K.S.A. 74-7001 et seq. or the rules and regulations promulgated and adopted by the board shall: (1) report the alleged violation to the board; and (2) cooperate with the board furnishing information or any assistance that may be required." To make this process easier, the following report of alleged violation form may be used. This use is not mandatory, however, and in many cases a written letter explaining the problem may provide even more information.

Inquiries may be sent to the Kansas State Board of Technical Professions, 900 SW Jackson, Room 507, Topeka, Kansas 66612-1257. It is important that the individual provide his or her name and address, as the Board cannot investigate anonymous inquiries.

KANSAS STATE BOARD OF TECHNICAL PROFESSIONS REPORT OF ALLEGED VIOLATION FORM

1.

Your Name, Address, & Phone Number:

2.

Address of the building or project:

3.

Name & address of person being reported:

4.

Name of owner of project (if known):

5.

Continuing Education

Non-compliance of CE

From time to time there is a notice that a license has been cancelled due to non-compliance to the continuing education requirement. As per regulation 66-14-1 each land surveyor, landscape architect, architect, professional engineer, and geologist has to have 30 professional development hours (PDHs) of acceptable continuing education each renewal period. In some cases, the licensee has obtained the continuing education but fails to document attendance. This is why it is very important to maintain documentation of attendance throughout the renewal period. It is often very difficult to back track to find all the paper work when it is needed.

In some cases licensees just do not respond when the audit request arrives. This is found usually when the audit is conducted after a person has already renewed the license. If not working in Kansas, then an option would be to ask that the license be put on retired status. If on retired status in Kansas and a potential project appears, then a person can obtain the continuing education and return to active practice. Remember an individual cannot solicit projects while on a retired license. Offering to practice a technical profession in Kansas is a violation of the practice act.

The main issue is that when there is a notice from the

Board, then respond to it. If the continuing education hours have not been obtained then just let the Board know. If the Board denies some of the professional development hours, then there will be time given to obtain the PDHs or justify the ones being denied. Except for possibly the public members, the Board is comprised of Kansas licensees who have to get continuing education to meet renewal requirements like all other licensees. While the Board has to follow the law in making decisions, they also understand the issues of working professionals. If there is an audit and no communication is forthcoming, then the Board has no choices in making decisions.

Reciprocity In Continuing Education

The reciprocity rule was implemented to assist Kansas licensees who live and are licensed as technical professionals in other states. If you are a Kansas licensee but a resident of another state, you may satisfy Kansas continuing education requirements for license renewal by meeting the continuing education requirements of the state of residency. If audited you will still need to provide documentation of attendance. You will also be required to provide documentation that you are a licensee in the other state. In some instances the number of professional development hours may be less than is required in Kansas. On the renewal application you will check the compliance statement that you have met the continuing education requirement.

66-14-10. Reciprocity. (a) Except as specified below in

subsection (b), licensees of Kansas who are residents of any other jurisdiction shall meet the continuing education requirements of the board or of their resident jurisdiction. The board's continuing education requirements may be satisfied if a non-resident licensee provides evidence of having met the continuing education requirements of that individual's resident jurisdiction.

(b) If a licensee resides in a jurisdiction that has no continuing education requirements, the licensee shall meet the continuing education requirements of the board.

(c) Proof of compliance shall be presented in conformance with these regulations. (Authorized by K.S.A. 1999 Supp. 74-7013; implementing K.S.A. 1999 Supp. 74-7025; effective March 1, 1996; amended Feb. 9, 2001.)

Computer Administration of the L.A.R.E. To Begin In August

Landscape Architectural Students and Licensure Candidates Can Register Beginning May 1, 2003 to Take Sections A and B

The Council of Landscape Architectural Registration Boards (CLARB) announced that for the first time, sections of the Landscape Architect Registration Examination (L.A.R.E.) will be administered on computer. The first computerized test will be given on August 11, 2003 and will include multiple-choice Section A (Legal and Administrative Aspects of Design) and Section B (Analytical Aspects of Practice). Examinees can register for the test online at the CLARB Web site (www.clarb.org) and can take the test at any of more than 700 computer testing centers across the U.S. and Canada operated by the LaserGrade Computer Testing Company.

CLARB President William P. “Chip” Winslow, III explains that landscape architectural registration boards made computerization of the L.A.R.E. a priority several years ago, but barriers of cost and administration kept it from becoming a reality. “Today, with advancements in technology and the expanded development of computer-based testing facilities, we believe we have found a way to administer the multiple-choice sections on computer at a reasonable cost to exam candidates and without passing more work onto the boards. In fact, candidates taking both sections in August should be pleased to learn that CLARB is passing substantial savings directly on to them.”

Winslow says that while several sections of the examination are experience-dependent (meaning candidates need practical experience to pass them), CLARB’s data indicates that Sections A and B are less so, drawing instead from the knowledge candidates have accumulated from school and some limited work experience. While examinees still need to prepare for the test, Winslow adds, “Candidates are probably ready to take Sections A and B sooner than they think they are.”

CLARB Director of Examinations James Penrod says that because CLARB will be handling registration, administration and score reporting, giving the computerized sec-

tions in August will not place additional administrative or financial burdens on registration boards. “Nor will it force our member boards to change their procedures,” he adds. “It was clear that any proposed change to the L.A.R.E. administration process had to have the support of the registration boards. At their March meeting, CLARB members heartily endorsed it.”

Penrod wants the landscape architectural community to know that candidate input helped shape the process being implemented this summer. “Candidate concerns about travel, cost, infrequency of administration (Sections A and B have only been offered once a year in June), and the length of time to receive scores were heard loud and clear.” Will computerized testing be a permanent fixture in landscape architecture? “Whether or not we can make computerized testing a permanent program depends on the turnout and response to this administration.”

CLARB-administered computerized testing offers a number of benefits to examinees:

Reduced costs - The administration and registration fees for taking Sections A and B are less than the price typically charged for the paper and pencil test. Also, with more than 700 testing centers available, examinees’ travel time and expenses, including lost work time, are significantly reduced.

Less stress - Taking the L.A.R.E. in portions allows examinees to concentrate their preparation on one or two sections at a time. Computerized testing centers offer comfortable facilities and professional staff to guide each examinee through the process.

Simpler registration - Examinees can register and pay online in minutes. Plus, they can register as late as six days before the test.

Faster results - Examinees will receive scores in approximately two weeks, instead of months. For examinees applying for licensure, CLARB will transmit scores

once for free.

Begin the licensure process sooner - Recent and soon-to-be graduates could be eligible to take this August’s exam and apply their knowledge while the material is still fresh. Young professionals that start down the road to licensure show potential employers a strong commitment to professionalism and the profession of landscape architecture.

Examinees will still need to meet all of the requirements in their state or province - including experience requirements - to take the remaining sections of the L.A.R.E. and to apply for licensure.

Streamlined communication - Taking the examination through CLARB ensures that examinees receive information on L.A.R.E. preparation material directly from the source.

Aspiring landscape architects who are interested in taking the exam this August are encouraged to visit the CLARB Web site (www.clarb.org) after April 30, 2003 to find out more about the August administration and to begin the registration process. Because space in the testing centers will be limited, examinees should register and select a test site as early as possible. The deadline for registering is August 5, 2003.

Created in 1970, the Council of Landscape Architectural Registration Boards (CLARB) is a non-profit international association whose members are the 47 U.S. states and territories and two Canadian provinces that license landscape architects. As an organization of member boards, CLARB’s mission is to foster the public health, safety and welfare related to the use and protection of the natural and built environment affected by the practice of landscape architecture.

Moberly Participates in Writing Geology Tests

Richard L. Moberly, Geologist member of the Kansas State Board of Technical Professions, recently attended the National Association of State Board of Geologist (ASBOG) Council of Examiner Workshop in Lincoln, Nebraska. The purpose of this workshop was to evaluate the ASBOG Fundamentals of Geology (FG) and Practice of Geology (PG) examinations that were recently given across the country. The FG Examination emphasizes knowledge and skills that are typically acquired in an academic setting and lead to a baccalaureate degree. The PG Examination evaluates the skills and knowledge that are acquired or expanded in a practice or job setting.

The geologists participating in the Workshop represent the profession in terms of geography, ethnicity, gender, and area of practice. They are called subject matter experts (SME), and together they form the Council of Examiners (COE). During the Workshop each question with possible answers was discussed in detail to ensure the quality and fairness of the examinations. The review

process ensures that the questions remain current with changes in the profession. The content, format, and statistical performance of the questions are carefully reviewed to maintain the accuracy of the questions across time.

After completion of the examination evaluation, the group spent considerable time preparing new questions and answers for future tests. Each question with answers is prepared by one geologist and then reviewed and approved by four additional geologists before being considered for use on future tests. A great deal of research goes into the development of each question as well as the correct and incorrect answers.

The Kansas State Board of Technical Professions Licensed the Following Individuals By Comity/Reciprocity Between May 1, 2002 and May 1, 2003
